

Highest Performance for your lightweight applications!

Our Airlay-Technology provides infinite possibilities for your applications. Sustainable, available, fast delivered.

100% recycled

Made in europe

Environment friendly

Light weight

Customized

2024 / 2025

Your Advantages:

Perfect for the use of coarse & recycled fibers. The lamination or needling of cover felts or foils is possible. The material can be heavily needled from both sides or gently needled from one side. We provide the material wind up as roll or stacked on pallet as blanked.

Technical specifications:

Production width
2800 - 3200 mm

Fiber length
40 - 90 mm

Available as **roll** or **blanks**

Weight range
1000 - 2400 gsm

Automized **In-line cut** and **palettization**

Details:

Our highly moldable carrier substrates are made from natural and recycled raw materials. Their applications are in the interior and exterior of vehicles.

Interior applications: **Door panel, Center console, ABC pillars, Parcel shelf, Spare wheel cover, Trunk compartment, Back seat cover**

Exterior applications: In the exterior area they are used, among other things, as acoustic and thermal encapsulation in the transmission and engine compartment.
